

BACK-END ENGINEER (Jr.)

Synthetica is looking for an energetic Back-End Engineer for a full-time position in Athens, Greece. The successful candidate will become an integral part of a team that develops innovative software for market leading customers. Individuals with strong Web Tech and Coding background, but no experience in the proposed frameworks are also encouraged to apply.

RESPONSIBILITIES

- Develop software for Data Science and Machine Learning Applications
- Build reusable APIs covering product and UI needs
- Participate in product design and new features development
- Deliver clean reusable and primarily functional code
- Optimize applications for maximum speed and scalability
- Employ traditional CS patterns & discover new ones like reactive programming and event sourcing.

MINIMUM QUALIFICATIONS

- Degree in Computer Science or in relevant field
- 1+ years of working with python and/or NodeJS
- Strong CS background
- Solid understanding of web architecture
- Good analytical and problem-solving skills
- Strong technical skills in Linux
- Familiarity with Git

ADDITIONAL QUALIFICATIONS

- Familiarity with OOP principles and design patterns
- Experience with Flask
- Experience with SQL Database (e.g. Postgres, MySQL, Sqlite)
- Experience with NoSQL Database (e.g. MongoDB)
- Experience with JavaScript frameworks/UI libraries (preferably React)
